Electronics has become the largest industry, surpassing agriCULTure, auto. and heavy metal industries. It has become the industry of choice for a country to prosper, already having given rise to the phenomenal prosperity of Japan. Korea. Singapore. Hong Kong. and Ireland among others. At the current growth rate, total worldwide semiconductor sales will reach \$300B by the year 2000. The key electronic technologies responsible for the growth of the industry include semiconductors. the packaging of semiconductors for systems use in auto, telecom, computer, consumer, aerospace, and medical industries. displays. magnetic, and optical storage as well as software and system technologies. There has been a paradigm shift, however, in these technologies. from mainframe and supercomputer applications at any cost. to consumer applications at approximately one-tenth the cost and size. Personal computers are a good example. going from \$500IMIP when products were first introduced in 1981, to a projected \$11MIP within 10 years. Thin. light portable. user friendly and very low-cost are. therefore. the attributes of tomorrow's computing and communications systems. Electronic packaging is defined as

interconnection, powering, cooling, and protecting semiconductor chips for reliable systems. It is a key enabling technology achieving the requirements for reducing the size and cost at the system and product level.

Multichip Module Technology Handbook Philip E. Garrou, Iwona Turlik, 1998 MCMs are electronic components that house multiple integrated circuits (ICs) upon a single chip. Their use in design allows systems that are faster, hotter and more reliable than those built with standalone ICs. More and more, the speed needs of electronic systems require MCMs. This comprehensive handbook aims to provide designers with the knowledge needed to understand and work with MCMs.
