Alternative Medicine for the Elderly

2013-04-18 P. Cherniack The explosion of information about complementary and alternative medicine (CAM) has demanded the attention of health professionals and responsible consumers, including the elderly. Increasingly, medical schools are providing education about CAM. This book brings together for academicians and interested mainstream practitioners much of the current information on CAM and its role in the health of the elderly. The individual chapters are thoroughly researched and quite readable, even for patients and the lay public concerned with the state of the evidence and art supporting CAM's role in prevention and management of illness and well-being. This book provides educators with much necessary information needed to prepare coursework and learning activities. Although definitive data are lacking regarding efficacy and even safety of CAM methodologies, many chapters in this book summarize the existing evidence in a usable way. The topics analyzed range from well-accepted therapies, such as vitamin E for dementia and zinc tablets for the common cold, to far less conventional therapies such as transcendental meditation. The conclusions are often surprising, but well-presented and defended. Even the most highly controversial areas, such as the use of acupuncture to treat low back pain and osteoarthritis of the knee, are thoroughly and fairly reviewed. Finally, the chapters address some of the political issues that challenge CAM. These issues include who should be allowed to practice a CAM discipline whose efficacy is not based on the scientific method, and some of the state-to-state variations in practice standards and licensure.

Trigger Point Therapy for Myofascial Pain

2005-08-22 Donna Finando A clinical reference manual for the evaluation and treatment of muscle pain • Contains detailed illustrations of pain patterns and trigger-point locations • 15,000 copies sold in first hardcover edition Myofascial pain syndromes are among the fastest growing problems that physicians, osteopaths, acupuncturists, and physical, occupational, and massage therapists encounter in their patients. Healing Trauma in Children with Clay Field Therapy

2021-11-02 Cornelia Elbrecht The first book of its kind on treating trauma in children through creative play with clay, written by a leading voice in the field of art therapy. From the moment we're born, we rely on our hands to perceive the world. It's through touch that we communicate with our primary caregivers and attain an abiding sense of love and security. In Clay Field therapy, client children work with clay and water in a rectangular box. The therapeutic focus is not on object creation, but on the touch connection with the clay as a symbolic external world. Movement, touch, and sensory feedback that have long been out of reach are actualized through the creative process, enabling the child to heal past wounds and regain a more fulfilling sense of self. Author and therapist Cornelia Elbrecht has been a leader in groundbreaking art therapy techniques for over 40 years. In *Healing Trauma in Children with Clay Field Therapy*, she shows how embodied expression within the Clay Field can be an effective tool in treating children suffering the mental, emotional, and physical effects of trauma. She discusses the theory and practice of Clay Field therapy using dozens of case examples and more than 200 images. Working within a fun, safe, and trusting environment, children respond with their embodied braced, chaotic, or dissociated structures of the past, but are then able to foster new sensorimotor experiences that enhance self-esteem, empowerment, and a restoration of developmental deficits. Child therapists will find this book to be a valuable tool--working with a Clay Field can reach even the earliest developmental trauma events, repairing their damage through the haptic hands-brain connection.

Spinal Manipulation Made Simple

2012-10-30 Jeffrey Maitland Written by an expert on alternative bodywork, this book presents techniques for manipulating the soft tissues of the back in a safe, simple manner. Instead, it utilizes the intuitive sense of somatic bodyworkers combined with the proven theory and technique of Roling to provide safe and effective treatment. Maitland shows how to elegantly release joint fixations in the spine, sacrum, pelvis, and ribcage by using subtle soft tissue techniques, rather than the thrusting techniques that "pop" the joints. This gentler

kind of individualized Roling work is thoroughly described within an explanation of biomechanics, aided by drawings and photographs which depict techniques and anatomy.

Back Pain

2012-12-06 J.K. Paterson As we stated in our message in the book of abstracts for this congress, we have planned the programme

over a long period with one clear objective: to present musculoskeletal medicine as an integral part of orthodox medical practice, rather than as something alternative or complementary. To this end we have based the plenary programme as far as possible on accepted epidemiological, anatomical, physiological and pathological phenomena. Scientifically well-validated material must surely be the base upon which any viable musculoskeletal medicine practice may be built. While we have chosen the plenary programme to reflect musculoskeletal medicine as a part of orthodoxy, we realize and wish to emphasize that there is a wealth of original work that has been carried out within FIMM. For this reason our first innovation for the congress was to invite members of the scientific advisory committee to select for a 'directed' programme the three topics they felt were of greatest current importance. The results of this democratic procedure was the choice of the sacroiliac joint, a comparison of manual therapies and biomechanics. This illustrates the broad direction of present thinking within FIMM.

But before doing so, check out with the human resource department before placing the information as most of the HR departments make it compulsory to consult them. Parents are required to be in regular touch with the teachers to know about the progress of the child and they have meetings from time to time. Do not miss this opportunity and spread the word. After creating the outline of the picture, pick lines that will actually attract the customer. The message shouldn't be long enough to bore the customer. Some advertisers are under the illusion that more the matter written, the better the message delivered. Usually they fear that they don't miss out any information. This does nothing but decreases the effectiveness of the ad and customer is left unsatisfied.

For example, the heading of the advertisement shouldn't be just "We Sell Clothes", which is too precise. The liking of the people should be studied and the headline should be designed such that the customer feels that his needs are met. It should also take into consideration seasonal changes like If the season at that time is summer and there are lots of beaches around that area, the heading of the ad should be something like "Summer Clothes for Sale" or "Get the heat off - Buy Swimwear". The body of the advertisement should talk of the necessities to switch to summer clothes like cotton clothing. It should discuss the health point of view too, like cotton cannot be used as swimwear as it will cause contamination, therefore the swimwear is made of synthetic material. Also include lines about swimwear for overweight people.

Ads are either traffic builder or relationship builders or reputation builder. Suppose the budget involved is less, the target should be relationship builder. Because once the customers are established, they will start trusting the

Dry Needling For Manual Therapists Points Techniques And Treatments Including Electroacupuncture And Advanced Tendon Techniques

company and won't switch to other companies. According to a research it takes ten percent less resources to retain existing customers than attracting new customer. If the focus is on brand recognition, the advertisement should be traffic building.

Amenorrhoea is the condition in which the female skips her menses for more than three consecutive menstrual cycles. Amenorrhoea is also classified as primary amenorrhoea and secondary amenorrhoea. Primary amenorrhoea develops from the onset of menstrual periods. In this condition, the adolescent might not get periods when she enters puberty. Secondary amenorrhoea is a condition where periods become irregular after a period of time and not from the start.

There are many causes of amenorrhoea such as ovulation abnormality, eating disorders, birth defects, anatomical abnormalities, malnourishment, anorexia, bulimia, pregnancy, over exercising, thyroid disorder, obesity and other medical conditions. Out of these ovulation abnormalities are a common cause for absent or irregular periods. It is a must that an adolescent start getting menses at least by the age of sixteen. If not, anatomical abnormality, birth defect and other medical conditions are the cause. Adolescents who participate in sports actively and are athletic have a lower body fat content because of which they have absent menses. Even because of malnourishment, the body is incapable of sustaining pregnancy. So in turn the body itself shuts down the reproductive system and menses. Extra fat cells in the body interfere with ovulation and that is the reason why obese

Before this person does anything, you will first have to answer a few questions. You will then be given a physical exam to check your pulse and observe the shape, color and coating of your tongue. Other things that are checked will be the color and texture of the skin and your posture as this will give clues to your health.

Only then will you be told to lie down on a padded examining table and the needles are inserted to the skin. The difference with this kind of needle is that they twirl and jiggle each time they are pushed further into the body. You may not feel them at all and if you do, it will only be a twitch that soon goes away. Once they are in place, this will be left there for 15 to 60 minutes that may make you feel very relaxed and sleepy that you may even doze off. Once the session is complete, the needles are removed and you will be on your way.

What you select for your child and how long he should work at it is basically decided by the child's temperament. As a parent, you should closely observe your child and base your decisions on feedback from the child himself.

How to find after school activities

Start off by making enquiries. Nothing can beat the power of information. Approach the school authorities first. Find out if they are offering any after school activities. Get a list of the various classes that are available in your school. In case the school does not provide any extracurricular activities for the child, approach your neighbors. Collect information about any after school programs, the quality of the courses taught and the timings etc. Also, check out some of the community resources. These may include places of worship, community centers, Museums, libraries, the YMCA, The Boys and Girls Club etc.

After you have collected all the necessary information, discuss the various options with your child. Find out what his interests are. The best way to find out what is most suitable is to ask your child. When little children are too small, you cannot completely rely on their feedback. In this case, monitor the development of the child on a regular basis. If the child shows excessive resistance to an activity, it may be necessary to look for other options. Always consider your family's schedule when planning the extracurricular activities. If it is difficult for you to chauffeur your child, you may want to employ tutors at home or conduct some activity at home itself.

Transracial adoption is where a colored child is

placed with white parents. Hoping that the color difference would not match up to the love and belonging the child would feel with its new family. There are fewer young white children available for adoption, leaving adoptive parents feeling the need to reach out and help any child in need, regardless of race. There are different opinions on Tran racial adoption, one is that a child should be put in a home with at least one parent of the same race. Others believe that race should not be considered at all.

To prepare for adoption it is important for everyone, but even more important if you're contemplating Tran racial adoption to consider a few things. When thinking of Tran racial adoption one should think about your personal beliefs and your attitude toward race and ethnicity. When you adopt a child who is considered different, the entire family will be different. One needs to remember that to some, different is strange and sometimes scary. Not everyone will understand your decision to adopt Tran racially. Here are a few more things to ask yourself, where you live, is it integrated? Are the schools in your area integrated? Do you have friends that are different races and ethnicity?

To Tran racially adopt you need to become seriously involved in parenting, you can not allow racially or ethnically prejudice remarks in your home. You will need to encompass your family with support. You should celebrate all cultures and do not be afraid to discuss race and culture. Most importantly you should be there for your child and let them know that no matter what someone says to them and no matter how bad it hurts them that you are there for them and that you love them. Parents of Tran racial adoption should encourage themselves and allow themselves to believe strongly that their family belongs together. You should make it very clear that it is not ok to make fun of

people who are different. Teach your child to stand up to
prejudice without starting fights. They should learn to use
their words not their fists.

If you are someone you know will be needing to use an air ambulance service, there are numerous factors to consider before making the trip. One factor to consider when flying in an air ambulance is the aircraft. If the patient must travel by air over a distance of 500 miles, then it is advisable to transport the patient in a jet. Before selecting any air ambulance service that uses jets to transport their patients, check to see if the aircrafts are equipped with RVSM.

What does RVSM mean? The letters RVSM are an abbreviation for Reduced Vertical Separation Minimum. RVSM is a modification to the jet aircraft that has been required by the FAA on all aircrafts that want to fly above 29,000 feet in the air. Despite the FAA regulation since January of 2005, many pilots have chosen not to make this modification to their jet aircraft. Without RVSM, pilots are forced to fly their aircraft at lower altitudes.

For personal flights, flying at lower altitudes is primarily a minor inconvenience, but when traveling for medical necessity by air ambulance, the situation changes. Patients flying on an air ambulance jet are in need of comfort, safety, and speed. The lack of RVSM requiring flight at lower altitudes compromises the patients comfort and the speed of the flight.

Infomercials are differentiated from other television advertisements on the basis of time. They are usually thirty minutes long like a regular program. They are also known as teleshopping or paid programming. One can catch them at odd hours of the day like early morning or late in the night. It's actually a commercial letting out the complete information about a particular product like expert advice on the product, how it should be used, its cost, and where it is available. They resemble more like a talk show than to a commercial as the advertisers communicate to viewers with the help of catchy phrases, celebrities and experts.

Television commercial donut is a template. Its like a blueprint and has all the necessary elements to make a finished commercial but the actual product is missing. Usually advertisers who find producing a commercial difficult use it. The local networks in return of purchase of airtime on their respective channels usually provide the commercial donut. It is a very cost effective method but it has a lack of creativity that will not ensure customer attraction. With the advancements in video editing technology this option is becoming increasingly popular among advertisers.

Promos or network promotional advertising involves television advertising. The amount of commercials that are being hosted on local and national television has been rising by the day and has featured almost everything one can imagine in the world.

The companies have a moral responsibility also in the society. These commercials have a negative impact on the society and leads to problems faced for the common woman. The major ill effect is the pressure on woman to get those near-perfect bodies. They get so pressurized that they take the unhealthy way to reach the set goals. They develop eating disorders; their health gets affected which may sometimes result in irreparable damages. And those who never make it to that point, face humiliation and get taunted by everyone around them. This results in depression and other long-term psychological diseases.

According to researches and surveys conducted, most of the women vow that commercials lower their self-confidence and they visualize themselves as unattractive due to the image being portrayed of the perfect woman in ads. In America, seventy-five percent of healthy females think that they are over-weight. Half of the women populations are on some kind of diet program and nearly ten million women suffer from serious eating disorders. The weight of a fashion model is twenty three percent less than an average weighed ordinary woman.

Advertisements haven't spared women being beaten up. In a particular after shave lotion commercial, the background voice says that its essential to learn martial arts because once a man applies the company's product, women around will be attracted and will pounce on him. Towards the end of the commercial, they show a male model kicking several women model that seem to have attracted to him. This is degradation of respect of women to the lowest level.

Unlike educational programs, recreational programs do not tax the mental processes. But, they do aid the learning process by making the child more active. A child who is physically active is mentally fit, and is able to focus his thoughts on the work at hand. Additionally, recreational programs teach discipline, mechanics of teamwork and fair play. These are important lessons in the growing process.

As more and more nuclear families emerge, the child faces greater isolation. Many children shuttle between their classroom and their bedrooms and do not have any meaningful relationships outside these. Recreational programs offer ample avenues for socialization. This is a place the child can go to and play even when his neighbor is not the most welcoming. The Boy / Girl Scout programs are excellent recreational after school programs. Lately, survival classes and camps have devised to combine important survival skills with sports and games to educate children on how to handle emergencies.

Like any good after school program, recreational programs are designed to give children a safe area where they can indulge in some group activities that interest them. This is one of the most effective ways to keep kids out of the streets and out of trouble. But, one has to be careful when enrolling children for recreational classes.
