Decolonizing Wealth

2018-10-16 Edgar Villanueva *Decolonizing Wealth* is a provocative analysis of the dysfunctional colonial dynamics at play in philanthropy and finance. Award-winning philanthropy executive Edgar Villanueva draws from the traditions from the Native way to prescribe the medicine for restoring balance and healing our divides. Though it seems counterintuitive, the philanthropic industry has evolved to mirror colonial structures and reproduces hierarchy, ultimately doing more harm than good. After 14 years in philanthropy, Edgar Villanueva has seen past the field's glamorous, altruistic façade, and into its shadows: the old boy networks, the savior complexes, and the internalized oppression among the "house slaves," and those select few people of color who gain access. All these funders reflect and perpetuate the same underlying dynamics that divide Us from Them and the haves from have-nots. In equal measure, he denounces the reproduction of systems of oppression while also advocating for an orientation towards justice to open the floodgates for a rising tide that lifts all boats. In the third and final section, Villanueva offers radical provocations to funders and outlines his Seven Steps for Healing. With great compassion—because the Native way is to bring the oppressor into the circle of healing—Villanueva is able to both diagnose the fatal flaws in philanthropy and provide thoughtful solutions to these systemic imbalances. *Decolonizing Wealth* is a timely and critical book that preaches for mutually assured liberation in which we are all inter-connected.

Insights in Coronavirus Disease (COVID-19) - Surveillance, Prevention and Treatment

The Critical Public Health Value of Vaccines

2022-01-29 National Academies of Sciences, Engineering, and Medicine Immunization against disease is among the most successful global health efforts of the modern era, and substantial gains in vaccination coverage rates have been achieved worldwide. However, that progress has stagnated in recent years, leaving an estimated 20 million children worldwide either undervaccinated or completely unvaccinated. The determinants of vaccination uptake are complex, mutable, and context specific. A primary driver is vaccine hesitancy - defined as a "delay in acceptance or refusal of vaccines despite availability of vaccination services". The majority of vaccine-hesitant people fall somewhere on a spectrum from vaccine acceptance to vaccine denial. Vaccine uptake is also hampered by socioeconomic or structural barriers to access. On August 17-20, 2020, the Forum on Microbial Threats at the National Academies of Sciences, Engineering, and Medicine held a 4-day virtual workshop titled *The Critical Public Health Value of Vaccines: Tackling Issues of Access and Hesitancy*. The workshop focused on two main areas (vaccine access and vaccine confidence) and gave particular consideration to health systems, research opportunities, communication strategies, and policies that could be considered to address access, perception, attitudes, and behaviors toward vaccination. This publication summarizes the presentations and discussion of the workshop.

Covid-19 Responses of Local Communities around the World

2022-11-25 Khun Eng Kuah Presenting a wide range of international case studies, the contributors to this book study the impact of Covid-19 on the risks faced by communities around the globe. Examining cases from the Americas, Europe and Asia - including Mexico, Brazil, China, India, France, and Belgium - Kuah, Guiheux, Lim and their collaborators look at how communities have coped with the social and economic impacts of the pandemic, as well as the public health concerns. Using a framework of risks, fear, and trust, they evaluate how the global health crisis has both revealed and exacerbated a deep crisis of confidence in institutions and systems around the world. In reaction to this they also look at how individuals, social groups and communities have faced fears and built trust at a more local level. The units of spatial analysis in these cases include urban cities, neighbourhoods, slum settlements, migrant camps, schools, markets and homes, for a broad spectrum of case types and rich empirical data. Essential reading for social scientists including sociologists, anthropologists and scholars of other disciplines looking to understand the impact of the Covid-19 pandemic internationally and on a multi-scalar level.

Treatment Program Evaluation

2022-06-01 Allyson Kelley This invaluable text provides a rigorous guide to the assessment and evaluation of treatment programs through a multi-disciplinary, holistic model of care. It highlights issues of race, social justice, and health equity, and offers real-world guidance to effect community healing and transformation. Written by a researcher and experienced evaluator, the book begins by outlining the theories and research which frame our understanding of substance misuse, and upon which treatment programs are based. It then examines the principles which should underpin any evaluation, before detailing the practical various steps required to conduct an evaluation, from data collection to outcome measurement. The book shows, too, through detailed and effective evaluation, policy changes can be made and treatment programs improved. Including practical examples of evaluation and assessment throughout, and also assessing the numerous social systems which can support recovery, the book builds to a four-step public health model for establishing sustainable treatment programs. In an era where substance misuse has reached epidemic proportions in the United States and beyond, this book will be essential reading for anyone involved in public health policy and practice in this important area.

Leading Through a Pandemic

2020-08-25 Michael J. Dowling "A clarifying must-read in these uncertain times." —GOVERNOR ANDREW CUOMO Journey behind the front lines of the coronavirus pandemic with Northwell Health, New York's largest health system. What was it like at the epicenter, inside the health system that cared for more COVID-19 patients than any other in the United States? *Leading Through a Pandemic: The Inside Story of Lessons Learned* about

Innovation, Leadership, and Humanity During the COVID-19 Crisis takes readers inside Northwell Health, New York's largest health system. From the C-suite to the front lines, the book reports on groundwork that positioned Northwell as uniquely prepared for the pandemic. Two decades ago, Northwell leaders began preparing for disasters—floods, hurricanes, blackouts, viruses, and more based on the belief that "bad things will happen and we have to be ready." Following a course highly unusual for an American health system, Northwell developed one of the most advanced non-government emergency response systems in the country. Northwell reached a point where leaders could confidently say "we are comfortable being uncomfortable in a crisis." But even with sustained preparation, the pandemic stands as a singularly humbling experience. *Leading Through a Pandemic* offers guidance on how hospitals and health systems throughout the country can prepare more effectively for the next viral threat. The book includes dramatic stories from the front lines at the peak of the viral assault and lessons of what went well, and what did not. The authors draw upon the Northwell experience to prescribe changes in the health care system for next time. Beyond the obvious need for increased stockpiles of supplies and equipment is the far more challenging task of fundamentally changing the culture of American health care to embrace a more robust emergency response capability in hospitals and systems of all sizes across the nation. The book is a must read for health care professionals, policy-makers, journalists, and readers whose curiosity demands a deeper dive into the surreal realm of the coronavirus pandemic.

Framework for Equitable Allocation of COVID-19 Vaccine

2020-11-30 National Academies of Sciences, Engineering, and Medicine In response to the coronavirus disease 2019 (COVID-19) pandemic and the societal disruption it has brought, national governments and the international community have invested billions of dollars and immense amounts of human resources to develop a safe and effective vaccine in an unprecedented time frame. Vaccination against this novel coronavirus, severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2), offers the possibility of significantly reducing severe morbidity and mortality and transmission when deployed alongside other public health strategies and improved therapies. Health equity is intertwined with the impact of COVID-19 and there are certain populations that are at increased risk of severe illness or death from COVID-19. In the United States and worldwide, the pandemic is having a disproportionate impact on people who are already disadvantaged by virtue of their race and ethnicity, age, health status, residence, occupation, socioeconomic condition, or other contributing factors. *Framework for Equitable Allocation of COVID-19 Vaccine* offers an overarching framework for vaccine allocation to assist policy makers in the domestic and global health communities. Built on widely accepted foundational principles and recognizing the distinctive characteristics of COVID-19, this report's recommendations address the commitments needed to implement equitable allocation policies for COVID-19 vaccine.

Handbook of Research on Transforming Government, Nonprofits, and Healthcare in a Post-Pandemic Era

2022-10-28 Howard, Joanne E. The COVID-19 pandemic has offered the world and its governments many challenges in how they will conduct their responsibilities and best assist their citizens. The COVID-19 pandemic not only brought a global health emergency, but also helped to shed light on systemic inequalities, caused conspiracy and distrust within the masses, and exhausted global health services. The government and nonprofit sector, including healthcare, education, and social service organizations, will have to utilize the best practices, greater collaboration, and joint venturing to survive post pandemic. *The Handbook of Research on Transforming Government, Nonprofits, and Healthcare in a Post-Pandemic Era* serves as a resource for those in education, healthcare, government, social service, and other nonprofit organizations who wish to advance their missions in an age of uncertainty. It further discusses how democracy can continue to advance the world, its countries, and the way that we see one another. Covering topics such as BIPOC academic leaders, economic development, and health science education, this premier reference source is an essential resource for government officials, public administration, community leaders, advocacy networks, social service organizations, hospital administrators, health officials, medical professionals, students and faculty of higher education, researchers, and academicians.

Complex Governance Networks

2023-02-17 Göktuğ Morçöl What are the roles of governments and other actors in solving, or alleviating, collective action problems in today's world? The traditional conceptual frameworks of public administration and public policy studies have become less relevant in answering this question. This book critically assesses traditional conceptual frameworks and proposes an alternative: a complex governance networks (CGN) framework. Advocating that complexity theory should be systematically integrated with foundational concepts of public administration and public policy, Göktuğ Morçöl begins by clarifying the component concepts of CGN and then addresses the implications of CGN for key issues in public administration and policy studies: effectiveness, accountability, and democracy. He illustrates the applicability of the CGN concepts with examples for the COVID-19 pandemic and metropolitan governance, particularly the roles of business improvement districts in governance processes. Morçöl concludes by discussing the implications of CGN for the convergence of public administration and public policy education and offering suggestions for future studies using the CGN conceptualization. *Complex Governance Networks* is essential reading for both scholars and advanced students of public policy, public administration, public affairs, and related areas.

Inner-City Blues

2023-04-13 Darvin Anton Adams Black theology's addressing of economic poverty in the Black neighborhoods and communities of the United States gives substantive reasoning to the fact that Black poverty is a theological problem. In connecting the narrative of idolatry to the irreversible harm that is associated with all forms of poverty, this new book interlocks the racial subjugation of Black Americans with the false assumptions of capitalism. Here the inner-city blues of poverty are experienced by those who reside in metropolitan cities and rural towns. The poverty of Black Americans is described with a vision of development and reconciliation—one that is intentional in its use of cultural language and inclusive to the destructive images of Black people's deprivation. In understanding how idolatry foundationalizes deprivation in the inner-city communities, I envision the liberation motif in Black theology working with the mission of the Black church for the purposes of community empowerment and neighborhood development. As a form of material and structural poverty, Black poverty is an interdisciplinary study that requires a holistic approach to ministry. With a theological focus on deprived inner-city communities, this new volume strategically moves the conversation of Black poverty from description to construction to solution.

COVID-19 and Social Determinants of Health

2023-01-20 Adrian Bonner Health and socio-economic consequences of the COVID-19 pandemic have been exacerbated by central government-imposed austerity budgeting by local authorities and the health service. Survival of the City

2021-09-07 Edward Glaeser One of our great urbanists and one of our great public health experts join forces to reckon with how cities are changing in the face of existential threats the pandemic has only accelerated Cities can make us sick. They always have—diseases spread more easily when more people are close to one another. And disease is hardly the only ill that accompanies urban density. Cities have been demonized as breeding grounds for vice and crime from Sodom and Gomorrah on. But cities have flourished nonetheless because they are humanity's greatest invention, indispensable engines for creativity, innovation, wealth, and connection, the loom on which the fabric of civilization is woven. But cities now stand at a crossroads. During the global COVID crisis, cities grew silent as people worked from home—if they could work at all. The normal forms of socializing ground to a halt. How permanent are these changes? Advances in digital technology mean that many people can opt out of city life as never before. Will they? Are we on the brink of a post-urban world? City life will survive but individual cities face terrible risks, argue Edward Glaeser and David Cutler, and a wave of urban failure would be absolutely disastrous. In terms of intimacy and inspiration, nothing can replace what cities offer. Great cities have always demanded great management, and our current crisis has exposed fearful gaps in our capacity for good governance. It is possible to drive a city into the ground, pandemic or not. Glaeser and Cutler examine the evolution that is already happening, and describe the possible futures that lie before us: What will distinguish the cities that will flourish from the ones that won't? In America, they argue, deep inequities in health care and education are a particular blight on the future of our cities; solving them will be the difference between our collective good health and a downward spiral to a much darker place.

The State of the Global Education Crisis

2021-12-09 UNESCO "The global disruption to education caused by the COVID-19 pandemic is without parallel and the effects on learning are severe. The crisis brought education systems across the world to a halt, with school closures affecting more than 1.6 billion learners. While nearly every country in the world offered remote learning opportunities for students, the quality and reach of such initiatives varied greatly and were at best partial substitutes for in-person learning. Now, 21 months later, schools remain closed for millions of children and youth, and millions more are at risk of never returning to education. Evidence of the detrimental impacts of school closures on children's learning offer a harrowing reality: learning losses are substantial, with the most marginalized children and youth often disproportionately affected. Countries have an opportunity to accelerate learning recovery and make schools more efficient, equitable, and resilient by building on investments made and lessons learned during the crisis. Now is the time to shift from crisis to recovery - and beyond recovery, to resilient and transformative education systems that truly deliver learning and well-being for all children and youth."--The World Bank website.

Written in the tradition of The Big Short, Preventable continues Andy Slavitt's important work of addressing the uncomfortable realities that brought America to this place. And, he puts forth the solutions that will prevent us from being here again, ensuring a better, stronger country for everyone.

Beyond Crises

2021-02-19 Debbie Zacarian What are some lessons learned from the pandemic? We learned that, in times of crises, the humanitarian needs of students, families, and ourselves must be a top priority. We learned that forming effective partnerships with families and communities is essential to the health and well-being of our children. We were offered a blunt reminder that a system designed to serve the interests of a privileged few was destined to fail our historically underserved students, especially our millions of multilingual learners. Above all, we learned that the “normal” many of us have yearned for was never good enough—that we must envision a “better world,” where we build on our multilingual students’ unique assets and cultivate their inner brilliance. Only then will we deliver on their promise. It’s this “better world,” a world in which communities, schools, and classrooms work together as a “whole-child ecosystem,” Beyond Crises: Overcoming Linguistic and Cultural Inequities in Communities, Schools, and Classrooms sets out to create. Taking a look from the outside in, Debbie Zacarian, Margarita Calderón, and Margo Gottlieb address three critical arenas: 1. Imagining Communities describes how to design and enact strengths-based family and community partnerships, including the critical importance of identifying, valuing, and acknowledging each member’s assets and competencies, and the ways recent crises have amplified their struggles. 2. Imagining Schools takes an up-close look at policies, structures, and now irrelevant ways of schooling that call for change and how we might reconfigure professional development to ensure every teacher and administrator is dedicated to the well-being and success of our multilingual learners. 3. Imagining Classrooms demonstrates how to optimize learning opportunities—both virtual and face-to-face—so our diverse students grow cognitively, linguistically, and social-emotionally, and accentuate their talents in knowing and using multiple languages in linguistically and culturally sustainable environments. “Student and family, classroom, school, and local community are not silos unto themselves,” Debbie, Margarita, and Margo insist. “They are part of a larger whole that is interrelated and interconnected and, even, interdependent on each other. By forming stronger alliances, we can realize the power of truly working, socializing, and flourishing together.” Beyond Crises is the first critical step forward.

If, like me, you have quite a fear of needles and injections, then acupuncture, that practice of sticking needles onto different parts of your body to cure sicknesses might seem scary at first.

However, if you've been long been suffering from some problems like headaches or chronic pains and your regular visits to the doctor don't seem to be helping you, then why not consider a trip to an acupuncture specialist? After all, who hasn't heard of somebody's aunt somewhere suffering from arthritis and trying out everything that the doctors recommended all to no avail, only to finally be cured by a really good acupuncturist?

Perhaps you were wondering if it could actually work for you. You might feel a bit skeptical since traditional Chinese medicine doesn't immediately coincide with theories in modern Western medicine. In fact, the use of needles to cure people was discovered thousands of years ago in China long before microscopes or x-ray machines were invented or before bacteria and germs were discovered.

Need for after school activities

When children are literally up to their gills with the learning and sport activities in school, it may seem superfluous to enroll them for after school activities. In spite of this, after school programs are sprouting up in large numbers and most of these are booked full. This shows that there is a real need for after school activities.

The unavailability of parental supervision is the leading cause for the surge in after school programs. It is seen that many children spend about 20-25 hours a week unsupervised and alone at home. And as the saying goes, "An idle mind is a devil's workshop". Children who are left alone to contend with too much free time invariably fall into the wrong company. Drug abuse, alcohol, tobacco and crime come knocking at their doors sooner rather than later. Parents enroll children to various after school programs to keep them occupied in a productive manner. This way, the kids are free to enjoy themselves in a supervised activity.

First, try to put things that you have, to use i.e. the five senses along with the brain. Eyes can capture the most beautiful scenes; try remembering those that are creative. Try to observe the Mother Nature like observing the sunset, the patterns of colors like yellow, orange, red and violet. Observe greenery around, the flora and fauna. Next put your ears and mouth to use and try increasing the observation power. This can be done by walking around the neighborhood or nearby park and trying to observe new things everyday at the same location. Just seeing a thing isn't enough, analyze the expressions of the people around you and analyze the emotions they depict. The brain can be fed with many things at once, so carry a camera along and take a lot of pictures of objects from different angles and lighting. Try to understand and capture the mood and things, which will help in creating a perfect scene. Like vanilla ice-cream will become more attractive when cherry and mint leave are added as topping. After school programs and discipline

How important is discipline when it comes to after school programs? Since most of the activities are recreational, does a program have to adhere to strict rules? Discipline is just as important here as it is in activities that pertain to the school. The child is sent to a program because you want him to learn more. Discipline in one form or the other is necessary to facilitate learning.

Every program should begin by laying down the rules. The supervisor or teacher should explain each rule and can thus prevent future mishaps. Misbehavior should be addressed as and when it occurs. Deal with the problem in such a manner that it causes the least disruption. It is unwise to turn a blind eye to misbehavior because it catches on like fire, and soon you will have a bunch of unruly children on your hands. Besides, however much they resist it, children like to operate within the safety net of strict guidelines and rules.

When a child misbehaves, it is mostly due to a craving for attention. A supervisor should observe the children and find out what the child wants. Talk to the child so that you can understand what he or she wants. Appropriate disciplinary measures should be taken if there are no apparent reasons for bad behavior.

By giving them ways to burn up their excess energy and explore their creativity, after school programs help to shape the overall personality of the child.

Why does Lisa grumble when it is time for her to go for her piano lessons? How come Johnny abhors the sight of his skates now? After all, these children were very enthusiastic about the programs when they started off. What happened? Parents are often confused by the disturbing and often incongruous signals they receive from their children. One day the kids are excited about the new theatre class and in just a few short weeks they wail and moan when its time to go.
