Uremic Toxins Severin Ringoir, Raymond Vanholder, Shaul G. Massry, 2012-12-06 The present book contains the Proceedings of a two day Symposium on Uremic Toxins organized at the University of Ghent in Belgium. A series of guest lectures, free communications and posters have been presented. An international audience of 163 scientists from 16 nationalities listened to and discussed extensively a spectrum of topics brought forward by colleagues and researchers who worked for many years in the field of Uremic Toxins. There is a striking contrast between all the new dialysis strategies available in the work to clean the uremic patients and the almost non-progression of our knowledge on uremic toxins in the past decade. In this sense the symposium was felt by all participants as a new start for the research in the biochemical field of the definition of uremia. If the present volume would stimulate new work in this field in order to define uremia, or identify

the uremic toxins, the purpose of the organizers would be maximally fulfilled.

The Role of Protein and Amino Acids in Sustaining and Enhancing Performance Institute of Medicine, Committee on Military Nutrition Research, 1999-09-15 It is a commonly held belief that athletes, particularly body builders, have greater requirements for dietary protein than sedentary individuals. However, the evidence in support of this contention is controversial. This book is the latest in a series of publications designed to inform both civilian and military scientists and personnel about issues related to nutrition and military service. Among the many other stressors they experience, soldiers face unique nutritional demands during combat. Of particular concern is the role that dietary protein might play in controlling muscle mass and strength, response to injury and infection, and cognitive performance. The first part of the book contains the committee's summary of the workshop, responses to the Army's questions, conclusions, and recommendations.

The remainder of the book contains papers contributed by speakers at the workshop on such topics as, the effects of aging and hormones on regulation of muscle mass and function, alterations in protein metabolism due to the stress of injury or infection, the role of individual amino acids, the components of proteins, as neurotransmitters, hormones, and modulators of various physiological processes, and the efficacy and safety considerations associated with dietary supplements aimed at enhancing performance.

Disease Control Priorities, Third Edition (Volume 5) Dorairaj Prabhakaran, Shuchi Anand, Thomas A. Gaziano, Jean-Claude Mbanya, Rachel Nugent, 2017-11-17 Cardiovascular, respiratory, and related conditions cause more than 40 percent of all deaths globally, and their substantial burden is rising, particularly in low- and middle-income countries (LMICs). Their burden extends well beyond health effects to include significant economic and societal consequences. Most of these conditions are related, share risk factors, and have common control measures at the clinical, population, and policy levels. Lives can be extended and improved when these diseases are prevented, detected, and managed. This volume summarizes current knowledge and presents evidence-based interventions that are effective, cost-effective, and scalable in LMICs.

Idiopathic Hydronephrosis P.H. O'Reilly, J.A. Gosling, 2012-12-06 For more than a century, the condition now known as Idiopathic Hydronephrosis has been recognised as a clinical entity, and following the original description by Rayer in 1841 a variety of procedures were devised in attempts to correct the condition surgically. Most of these early methods were introduced in the last decade of the nineteenth century by several illustrious clinicians, including Trendelenburg, Koster, Fenger and Sutton. For many years diagnosis was based purely upon the patients presenting signs and symptoms and not until the early part of this century was technology available to assist in the pre-operative diagnosis of the condition. Early methods depended upon radiological techniques, and the introduction of the retrograde pyelogram by Voelcker and Lichtenberg in 1906 represented a significant advance in diagnostic methodology. Other methods also dependent upon radiographic techniques were subsequently introduced, including urography in the late 1930s by Swick, and more recently, the method of cineradiography, as pioneered with considerable success by Peter Narath in the decade following World War II. During the past 50 years a variety of surgical procedures have been introduced for the treatment of idiopathic hydronephrosis. That so many different methods have been devised suggests that no one specific technique is capable of achieving a complete cure in all cases.
