Advanced Excel Formulas Part 1: Excel's Logical Functions Grant Gamble,2017-12-12 Excel Formula Mastery The ability to write, understand and maintain complex formulas is the key to mastering Excel. Complex formulas make use of multiple functions to achieve a specific operation; and it is the need to nest one function inside another that can sometimes make Excel formulas seem so impenetrable. Advanced Excel Formulas is a practical, hands-on series of books which will show you how to create, comprehend and maintain complex Excel formulas; those which use multiple Excel functions in combination. A key feature of this series is the use of explanatory diagrams; which, for your convenience, are also provided for you in PDF format. You can study them at your leisure. You can print them out; make notes on them; whatever you find useful. Another key feature of these books is that we write our formulas on multiple lines and make strategic use of indentation. This makes it easier to read complex formulas, since it helps to emphasize the hierarchical relationship between the various functions used in a complex formula. This first book of the series focuses on Excel's conditional functions, since these are the most versatile of all Excel's functions. You will learn how to combine logical function, like IF, IFERROR, OR and AND with other Excel functions, to create complex and insightful formulas.

101 Most Popular Excel Formulas John Michaloudis,Bryan Hong,2022-02-17 Learn the Most Popular Excel Formulas Ever: VLOOKUP, IF, SUMIF, INDEX/MATCH, COUNT, plus Many More! You'll learn to apply the Top Excel Formulas to make your data analysis easier.

Mastering Excel Mark Moore,2017-05-22 In this lesson we cover all the options for applying conditional formats to a workbook. Conditional formats are formatting rules that we can apply so when a cell's number changes, the format will change automatically. This is an excellent feature to use to draw a user's attention to outlying numbers, problem areas or to give a quick visual summaries of the data. We will cover: * Highlight Cell Rules * Top/Bottom Rules * Data Bars * Color Scales * Icon Sets * Using Formulas In all the above, we will also go into how to customize all the options to make any report automatically update itself according to the criteria we set. Like the other lessons, this lesson contains a link where you can download a follow along workbook and practice what is covered. Note: If you know about conditional formatting and consider yourself an Excel expert, this book is not for you. This is for Excel beginners who want to learn about this feature in plain English with no technical jargon. The images, exercises and workbook are for Excel 2013 for Windows. Most of the images

and exercises will work with Excel 2010/2007 (but there may be slight differences). The workbook will not work with Excel for Mac.

Ctrl+Shift+Enter Mastering Excel Array Formulas Mike Girvin,2013-08-01 Designed with Excel gurus in mind, this handbook outlines how to create formulas that can be used to solve everyday problems with a series of data values that standard Excel formulas cannot or would be too arduous to attempt. Beginning with an introduction to array formulas, this manual examines topics such as how they differ from ordinary formulas, the benefits and drawbacks of their use, functions that can and cannot handle array calculations, and array constants and functions. Among the practical applications surveyed include how to extract data from tables and unique lists, how to get results that match any criteria, and how to utilize various methods for unique counts. This book contains 529 screen shots.

Mastering Excel: Formula Tips and Tricks Mark Moore,2013-10-24 Excel is all about formulas. Think through how to do a calculation once, make sure it is correct, then copy it to other cells and use it as many times as you need to. In this lesson, we go through some of the most popular (and few not so popular) formulas, we review their syntax, how to use them, and we will also learn some other non-formula tricks that will make our Excel files do all the work for us. Some formulas we review are common, some not so common but all of them are explained step-by-step with not technical jargon. Just plain English so everyone (even the math averse) can easily grasp the concepts. There is also a follow along workbook you can download so you can work through the formulas as you read the lesson. All images and exercises were created using Excel 2010 for Windows. Some exercises will appear different in prior versions. Some formulas are not available in Excel 2003.
